panels

Lightweight units

Geoplast Formwork

The simple formwork solution

Advantages

- Lightweight units that are fast and simple to install. Handles lock the units into position with a 90° turn
- Economical and cost effective. Many repeat uses with very little maintenance
- Easy to clean. Just rinse with water
- Easy to store. Can be completely dismantled. Does not need to be stored in a dry environment
- Robust units are resistant to damage
- No release agents needed. Concrete will not stick to the plastic surface
- Outer side of panels are ribbed to allow easy plumbing and anchoring of props
- Environmentally friendly. Many repeat uses and made from recycled materials
- Geopanel Star is adjustable and hence reduces the amount of sizes required
- Reduces pressure on crane time as formwork panels can be fixed and struck by hand

Easy to clean

Nationwide Depots

BAG Column Former

Circular column disposable formwork

Advantages

- Easy to handle and install (1)
- Simply pour the concrete into the tube (2)
- Economical
- High quality finish
- Tear-off strip for easy removal (3)
- Sleeve can aid curing and protect the column

Also available for
square columns

Shearstrip

Prefabricated shear reinforcement system for concrete slabs

Shearstrip is used for the transmission of high shear forces in flat floor applications with reduced requirements for formwork and reinforcement and for optimum use of space. They consist of double-headed anchors connected by a strip and are used within a slab to provide additional reinforcement around columns.

Advantages

- Increased load carrying capacity
- Quick and simple installation
- Installation possible from the top and bottom
- Simplified formwork design
- Can be used for flat ceilings from a thickness of 180mm
- Lower construction height of the ceiling due to higher load-carrying capacity than conventional reinforcement technology
- No thickening of reinforcement around column heads
- Can be used for all support positions and support forms

Design Service Available

Manufacture

Shearstrip is manufactured from 500C Grade Rebar Double Headed Studs, conforming to the strength and dimensional requirements incorporated within BS 8110 and BS EN 1992-1-1 (EC2).

Installation

Shearstrip rails are placed around the column in a calculated arrangement to meet the designed specification. The number, height and depth of the rails are determined by a calculation made using the criteria of the particular job. The carrier rails ensure correct positioning of the studs.

Nationwide Depots

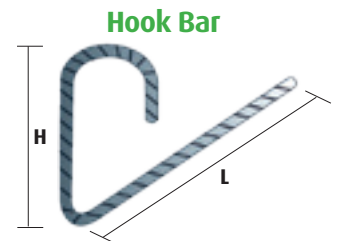

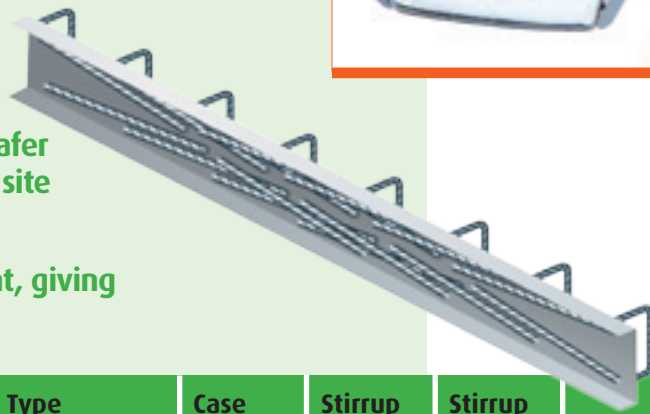

Conti Strip

Pull out reinforcement

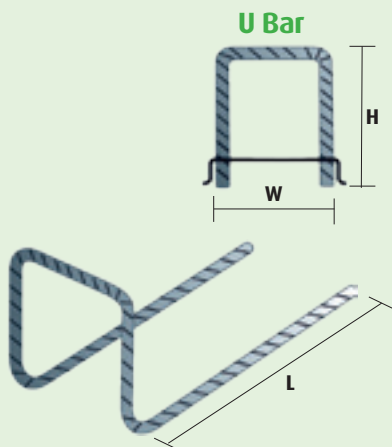

A simple and cost effective method of providing reinforcement connection across concrete joints. The system comprises pre-bent reinforcing bars within a steel casing. The unit is cast into the first pour and when the contractor is ready remove the lid and bend out the starter bars.

Advantages

- Simplifies formwork design and accelerates pour schedules
- No need to damage formwork by drilling or cutting
- Starter bars are housed within their case until ready for use, leaving a safer working environment on site
- Easy to use
- Forms a rebate in the joint, giving better shear connection

fischer

Firestop cast-in concrete device

A complete firestop system to protect pipe or cable installations through concrete floors.

Advantages

- Fast & Easy to install – only 4 nails/screws to fix
- The most economical way to seal pipes through floors - 40% saving over traditional methods
- Eliminates timber formwork and the need to work at heights to fit collars wraps
 - No additional mastic, making good or backfilling required
 - Sealed unit prevents water ingress
- Allows for connection of services within the unit
- Smoke tight
- Tested with various uPVC and HDPE pipes achieving a fire resistance of up to 4 hours in accordance with BS476.20:1987 & BS476.22:1987
- Extension sleeves and caps available for thicker slabs
- High visibility colour and reduction in trip hazard

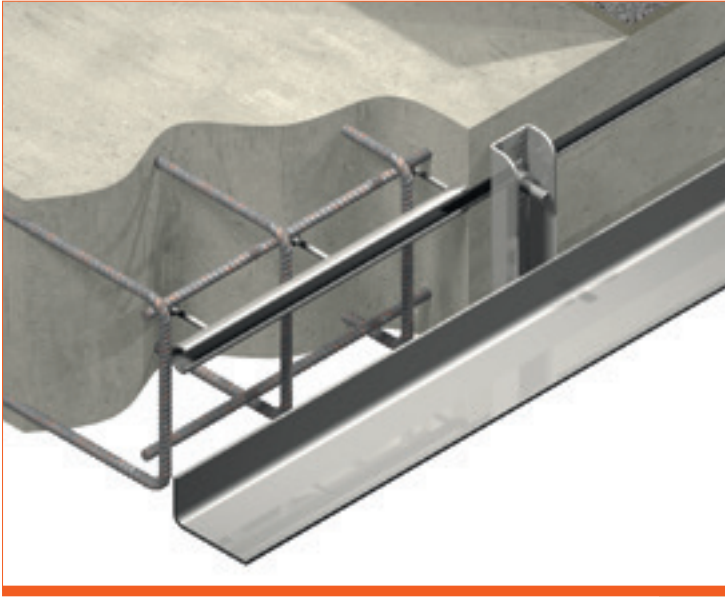

fischer 
FIXING SYSTEMS

1. Place the cast-in device on the formwork
2. Secure into position with nails through the notches provided, don't skew the nails
3. Pour concrete
4. Strip away formwork and knock out the cap from the top collar
5. Insert the pipe section through the collar

Channel Systems

Solutions to fix components to concrete structures

When looking for a method to fix components to concrete structures, ACS Cast-in channels provide a simple and effective solution. Our extensive range of products are specially designed to allow fixing to slender or highly reinforced concrete and consist of both cold rolled channels suitable for static loads and hot rolled channels for dynamic loads.

21/19 Apex channel

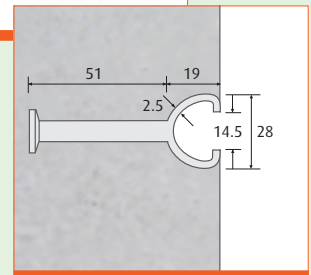

Brick tie channel

31/21 Axis curve channel

Brickwork support channel

Designed and manufactured to BS EN 100088, BS EN ISO 3506 and ETAG 001

Technical details available on request.

All other types and sizes of channels are available.
